Wednesday, February 17, 2016 at 1pm, Gund Hall 124

Improving Safety for Bicyclists and Pedestrians: Lessons from Boston and San Francisco

by Dahianna Lopez, RN, MSN, MPH
PhD candidate, Harvard T.H. Chan School of Public Health

Presentation of research on the prevention of injuries resulting from bicycle collisions. The focus is on the policies and politics of multi-agency collaboration related to building injury surveillance systems. Such systems are useful for identifying areas where injuries can be prevented via improvements in road engineering, urban design, law enforcement, and public health education.
